AI Policy

Human-Centered, Human-Made Stories

At Ciara.the.Vibe, people are the source of the story. My work centers on real conversations, original writing, thoughtful editing, and professional judgment grounded in hands-on client experience.

Human authorship and judgment

For commissioned creative work, I write the copy, develop the interview questions, and make the editorial decisions. I do not use generative AI to replace that work with generated writing, imagery, voices, or fabricated interviews.

My recommendations reflect your goals, our conversations, my experience, and what I observe in the work. I remain responsible for checking facts, interpreting context, and deciding what belongs in the finished story.

I value specificity, lived experience, and recognizable personality over interchangeable content.

Practical tools, clear boundaries

AI and automation are increasingly embedded in everyday business and production software. I may use technical features such as transcription, automatic captions, noise reduction, spelling checks, and footage organization. I review their outputs and correct errors.

I may also use AI-assisted research or administrative planning tools. These uses do not replace my responsibility for the creative work, recommendations, or final decisions.

This policy is not a guarantee that every software provider or hosting platform operates without AI. Where available, I disable optional model-training uses of client materials. I will discuss any proposed generative use of client content with you before proceeding.

Client use of my work

Without my prior written permission, clients may not upload, paste, or otherwise submit my writing, edits, footage, strategies, goals, recommendations, posts, or other project materials to generative AI systems.

This includes using those materials for automated analysis, rewriting, content generation, model training, fine-tuning, or imitation of my work—even when a tool offers a private or “no training” setting.

Routine storage, publishing, and technical processing through agreed project tools are separate from submitting work to a generative AI assistant. If a tool’s function is unclear, please ask before using it.

Questions or revisions

If you want something changed, bring it back to me. We can discuss the reasoning, clarify the goal, and agree on revisions while preserving the context and integrity of the work.
